Main Advantages of Rubitec VaruMill

Features of VaruMill:

- **No screws (bolts) in the product area which can get lost and get into your product**
- **No oil in bearing body because we don't use a gear**
- **Lower temperature of the bearing body during operation because no gear!**
- **Baskets are made with flange which makes the baskets much more stabile, stronger. (only by rubitec)**
- **Baskets are sealed with GMP-O-rings; to clean by CIP**
- **Sieve's with round holes and also rasp sieves available**
- **Cylindrical basket's and rotor's for very hard lumps.**
- **Conical baskets and also cylindrical baskets usable in the same mill!**
- **Sieve with integrated temperature measurement! (only by rubitec)**
- **Much stronger construction allows use of motors with higher torques. The mill can start always with fully feeding hopper or directly fitted at the outlet of a centrifuge or a dryer.**
- **All construction around the milling head is customized!**
- **Product contacted parts are available in AISI 316L and also in Hastelloy**
- **Varumill's are available in diameter 100, 200 and 300mm**
- **VaruMill 100 with adapter flange to decrease to Ø 50 or increase to DN 125**
- **VaruMill can also directly dose and fill on a scale for end weight**
- **Endless liner socket for CIP without break the containment**
